Course – Digital literacy(CSE0001)

INTRODUCTION

What is this project all about?

The project is a digital literacy project that allows a student to have a chance to understand how to use these tools in a better and safer way to improve their experience of being able to participate in this world that is so heavily involved in technology. Digital literacy is a vital skill for a student to be able to succeed in a world that revolves around technology.

One of the most valuable things that I learned through this project is that I can create a professional online presence and utilize different types of platforms, like GitHub and LinkedIn, and be able to communicate through email as a means of doing business. I learned how to properly maintain the security of my online presence and become aware of my online security vulnerabilities and the potential risks of a cyber attack. Finally, this project

has given me knowledge that will be useful in my educational and future career goals.

Why is digital literacy important?

The importance of digital literacy is that it can help us make use of technology in an effective and safe manner. Digital literacy helps students learn, communicate, and access information in a better way. It also helps in creating a professional online presence and safeguards against cyber attacks, which is extremely important in today's world.

TASK 1

Create a Digital Literacy Awareness Infographic

Tool used – Canva

I designed an infographic using Canva that is meant to inform students about this digital literacy concept. I included information about understanding digital literacy, digital tools such as Google docs, GitHub, LinkedIn, and also gave students information regarding safety when using the internet, such as creating passwords and being careful not to click suspicious links. I also gave information about maintaining a professional image online.

What this design shows and the difficulties?

I aimed for the content of my infographic to be brief and easy to comprehend and visually appealing by splitting the sections into sections with heading titles and using the right images. There were many different templates offered through Canva. This process of designing the infographic was easier than

I had thought it would be. I also think there were a lot of different elements of creativity in this process. A little bit of difficulty existed in getting all of the content elements on the same page without a crowded look on the page.

Task 2

Build Your Student Digital Portfolio

For this task, I have created my digital portfolio by creating accounts on GitHub, LinkedIn, and Kaggle. These are important tools in the development of a professional online presence and the demonstration of skills.

On GitHub, I have created my account and uploaded a README file with basic information about myself and my learning interests. GitHub is used mainly for the storage of projects.

On LinkedIn, I have completed my account by filling in the details of my educational background, including the college and course I pursued. LinkedIn is important in the development of professional networks and the search for opportunities.

Lastly, I have created a Kaggle account, which is important in the development of data science and learning through practice. In the future, I plan to use these platforms to enhance my skills and develop a strong online presence that will assist me in future internships and job opportunities and show me the path to help my future career .

Task 3

Explore Coding & Collaboration Platforms

Software used - HackerRank

For this task, I have used the HackerRank platform as my coding platform. In this platform, I have attempted a beginner-level coding problem named 'Solve Me First.' This task has helped me in understanding the coding platforms and has also provided me with some coding practice. This task has also helped me in gaining more confidence in solving coding problems and in understanding the way of solving the coding problems. In the context of collaboration, I have made use of Google Forms and created a 'Digital Literacy questions' with five questions. In this quiz, there are multiple questions of the multiple-choice and short answer type. This quiz is also linked with Google Sheets, and this has helped me in understanding the efficient way of using the Google Sheets platform. Both the platforms are very useful for me. HackerRank is very useful for the development of coding skills and in understanding where the mistake is and in developing the bond with the coding language.

Google Forms and Google Sheets can be very useful in efficient collaboration and in managing other responses and feedback.

Task 4

Draft a Professional Email & Etiquette Guide

One example of poor digital communication is when a student sends a rude email to the professor. For example, a student once wrote an email to the professor stating, "Send me the assignment marks as soon as possible." The student did not use any greeting in the email, which made the professor not only delay the response but also gave the student a bad impression. This situation could have been handled in a better way if the student had used proper digital communication skills or in a manner that can be more appropriate. For example, the student could have written a formal email requesting the marks in a polite and professional way. By using proper digital communication skills, the student could have created a positive impression.

Task 5

Cybercrime Awareness Case Study & Prevention Guide

Topic - cyberbullying

The thing that shocked me the most during my research on cyberbullying was how detrimental it can be to a person's mental health. I used to believe that jokes or remarks made online were not important, but I have since learned that receiving negative messages can lead to loneliness, anxiety, or depression. The fact that many individuals are reluctant to report these acts due to embarrassment or fear was also surprising.

Being more careful with my comments or remarks online is something I personally plan to work on. I will make an effort to speak more kindly or responsibly because even small remarks can have a profound effect on someone. Furthermore, if someone is being bullied online, I will be there to support them and not engage in any negative conversations.

Conclusion

This digital literacy project turned out to be a great learning experience for me. I learned the significance of interacting with technology in a smart, safe, and responsible manner. I also gained knowledge and practical skills in the use of various technologies such as Canva, GitHub, LinkedIn, Kaggle, and HackerRank. This not only helped me to improve my skills in the digital world but also to improve my professional demeanor.

I also learned the significance of having a great online presence and the need to communicate effectively in the digital world. I also learned something from the lesson on cyberbullying and how to be careful and considerate of others in the digital world. I learned to boost my confidence and also gain knowledge in the digital world.
